

## FIGHT BACK

It seems like every week another major corporation announces a large-scale security breach. For IT Managers, it's a concern that is requiring an increasing amount of time—and it's not a problem that is limited to Fortune 500 companies.

In the past, cyber attackers typically targeted a single large organization with the hopes of yielding one significant payout. Today, hackers are more strategic. They distribute their efforts, targeting a number of smaller firms in order to yield multiple smaller payouts—and it's a system that is working. So what do you do about it? Easy. You take the fight to them.

## Hit First

Traditional enterprise security products focus on keeping hackers out. But what happens when someone breaks through? In today's ever-changing threat landscape, security experts are encouraging organizations to assume that a compromise has already taken place. That's where Huntress Labs comes in. Developed by ex-NSA hackers, our program of managed detection and response augments your existing security stack by proactively seeking out potential footholds and persistence methods.

The process is simple. First, our lightweight endpoint collection agent will gather data and submit it for analysis. From there, our highly skilled team will review the data to identify any potential threats. If a breach is detected, we'll provide you with an actionable report, along with step-by-step instructions that outline how to remediate the threat.

The best part? Your team won't need any specialized (and costly) training.

## Why Huntress Labs?

### Operated by Operators

Our threat operations team is comprised of former penetration testers and reverse engineers with over a decade of advanced forensic security experience.

### Plays Well With Others

Our active threat hunting system works seamlessly with your current security stack.

### We Do The Heavy Lifting

Our threat operations team actively hunts threats, identifying potential footholds and persistence methods.

### Turnkey Remediation

When a threat is detected, you'll receive step-by-step instructions that tell you how to eliminate it once and for all.

### Deploy in Minutes

Our partners have deployed Huntress Labs to THOUSANDS of clients in less than 10 minutes using their existing RMM software.
